

**WiseEnergy Equipment Solutions, Inc becomes the Exclusive North American Importer of the German Product-line “Baunach **rendeMIX**” Multi-path Temperature Mixing Distributors Used to save Energy in Hydronic Heating Systems**

**December 20, 2006- St. Paul, MN & Merrill, WI-** WiseEnergy Equipment Solutions, Inc. a division of CorVal Group Inc, has entered into an exclusive North American importing agreement with the German based Baunach company to distribute the world patented Baunach **rendeMIX** product-line. This unique product is specially designed for a two temperature hydronic heating system when in conjunction with condensing boilers. The heart of the system is the patented 5 port multi-path temperature mixing distributor. The valve is designed to utilize the cooler return water of the higher temperature loop and blend it into the flow of the lower temperature loop. Because of the closer Delta-T between the two flows, it inversely lowers the boiler return water. The Baunach **rendeMIX** lowering the return water back to a condensing boiler can decrease gas consumption up to 5%. Energy efficiency is critical in today’s construction projects. Boilers, Geo-thermal and Solar related equipment all benefit from a reduction of excess pump installation requirements, faster install times and decreased total energy consumption when using Baunach Multi-path Temperature Mixing Distributors.

WiseEnergy Equipment Solutions, Inc. is seeking to establish distribution relationships with representatives throughout the US and Canadian that will call on wholesale companies interested in selling the Baunach product-line. Additionally, WiseEnergy Solutions will retain certain US territories to directly sell the unique Temperature Mixing Distributors of the **rendeMIX** line. Ted Schmelling, General Manager, WiseEnergy Equipment Solutions, states; “This is one of the many product line enhancements being made by our company to provide our clients with innovative ways to increase performance and reduce energy consumption in new and existing facilities.” WiseEnergy Equipment Solutions, Inc. provides equipment solutions to Contractors, Engineers, Building/Facility Managers, Developers, Owners, Government and Municipalities, Schools, Universities and various other clients.
